

# PRESSURE REDUCING VALVE DMV 755

Nominal size DN 10–50

Nominal size 3/8“–2“

Nominal pressure PN 10 bar

PVC-U

PP

PVDF

## Features

- pressure setting range 1 to 9 bar
- control valve for reliable reduction of system pressures to constant operating pressures
- constant, low vibration control behavior
- high reproducibility of the set pressure
- pressure setting possible at any time, also during operation

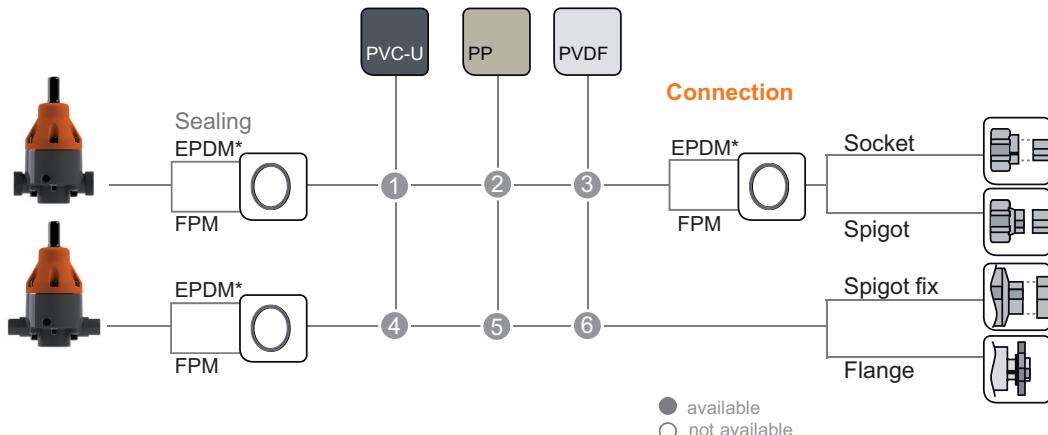

## Additional options on request

- silicone free
- pressure presetting
- pressure gauge hole
- sealed
- NSF certification

\* only for socket welding.

# Pressure Reducing Valve DMV 755

## Use

- chemical plant engineering
- industrial plant engineering
- water treatment

## Application

- The pressure reducing valve which is directly controlled by the medium, is used in technical processing plants for reducing primary pressures to system dependent working pressures and for controlled maintenance of working pressures. Not suitable as equipment with safety function according to the pressure vessel directive.

## Valve function

- The opened valve is in equilibrium between the inlet pressure (primary side) and the lower working pressure (secondary side). If the working pressure goes above or below the desired value, the large area membrane is lifted against the spring force or pressed down by the spring force. The valve starts closing or opening until the equilibrium condition is reached again, i.e. the working pressure remains constant independent of an increasing or decreasing inlet pressure (as long as the inlet pressure > working pressure).

## Valve setting

- Set or adjust the desired or permissible working pressure at the adjustment screw with the aid of pressure gauges (ASV diaphragm pressure gauge guard, type MDM 902) in the pipe system after removing the protection cap.  
The adjustment screw is secured by a counter nut and can be sealed against unauthorized adjustment, if necessary.
- There is a differentiation between:  
secondary pressure - system closed or  
secondary pressure - system dynamically flowing

## Flow medium

- Technically pure, neutral and aggressive fluids, provided that the selected valve materials coming into contact with the media are resistant at the operating temperature according to the ASV resistance guide.

## Flow direction

- always in the direction of the arrow, see the „sectional drawing“ graphic

## ASV resistance guide

[www.asv-stuebbe.de/pdf\\_resistance/300051.pdf](http://www.asv-stuebbe.de/pdf_resistance/300051.pdf)

## Process temperature

- See the „pressure/temperature diagram“ graphic

## Process pressure

- See the „pressure/temperature diagram“ graphic

## Nominal pressure ( $H_2O$ , 20 °C)

- PN 10 bar

## Size

- DN 10–50

## Pressure setting range

- 1–9 bar

## Working pressure

- set pressure minus flow dependent pressure reduction (see characteristic curves):  
secondary pressure 1–9 bar

## Constant working pressure

- Difference between the maximum and minimum secondary pressure, caused by primary pressure fluctuations: approx.  $\pm 0.2$  bar

## Hysteresis

- Difference between opening and closing pressure approx. 0.1–0.4 bar

## Actuation

- medium controlled

## Device connection

- see graphics  
„Pictograph, pressure reduction valve DMV 755“

## Pressure Reducing Valve DMV 755

### Material with medium contact

Housing:

- PVC-U, PP, PVDF

bonnet:

- PP, glass fiber reinforced

Diaphragm:

- PTFE  
(EPDM diaphragm, PTFE-coated on the medium side)

Sealing:

- FPM, EPDM

### Material without medium contact

Screws:

- stainless steel (1.4301)

### Mounting position

- as required

### Fastening

- via threaded inserts (metal inserts) in the valve body

### Color

- bonnet: orange, RAL 2004
- bottom section: PVC-U, gray, RAL 7011
- bottom section: PP, gray, RAL 7032
- bottom section: PVDF, opaque, yellowish-white

### Pressure gauge connection

- The pressure reducing valves can be factory fitted with a pressure gauge for neutral media. The resistance of the pressure gauge material has to be taken into consideration for other medium types.

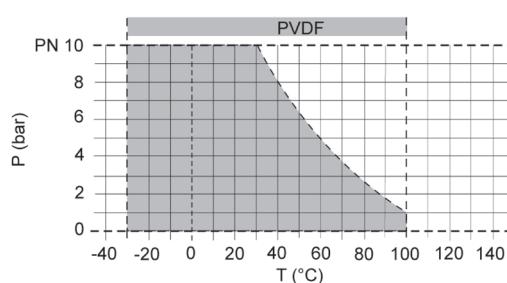

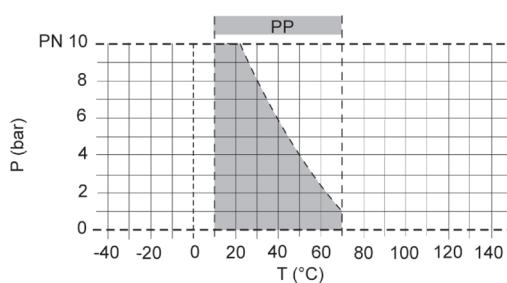

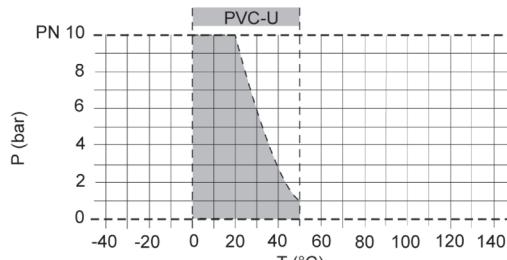

### Pressure gauge preparation

- Housing holes on both ends G 1/4" incl. plug

### Pressure gauge

- Chemical version, damped
- Chemical version, not damped
- Contact pressure gauge

### Pressure/temperature diagram

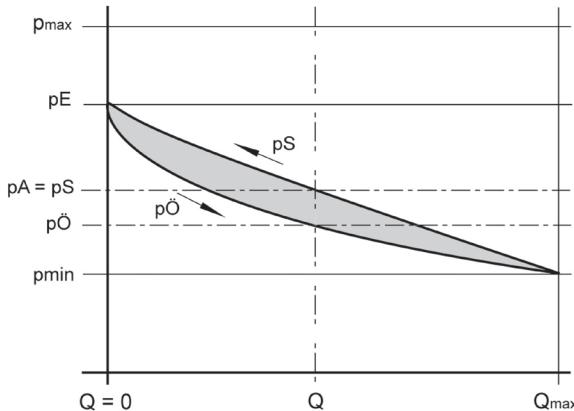

#### Description

|   |                    |
|---|--------------------|
| P | Operating pressure |
| T | Temperature        |

The pressure/temperature limits of the materials are valid for the stated nominal pressures and a service life of 25 years. These values are guide values for flow medium types which do not negatively impact the physical and chemical characteristics of the valve material. It may be necessary to take diminution factors into consideration. The durability of wear parts depends on the operating conditions of the application.

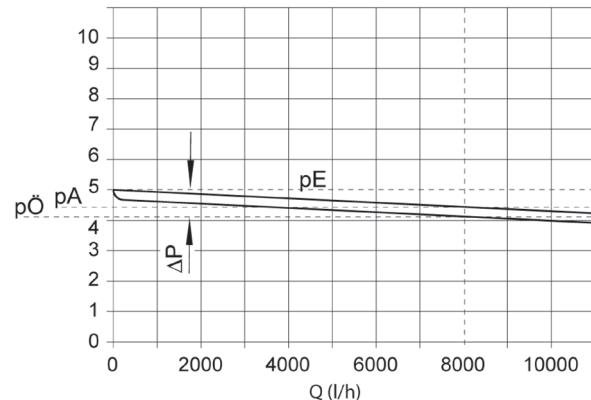

# Pressure Reducing Valve DMV 755

## Operating behavior

| Description      |                                   |
|------------------|-----------------------------------|
| pE               | set pressure                      |
| pA               | Working pressure                  |
| p <sub>max</sub> | maximum pressure                  |
| p <sub>min</sub> | minimum pressure                  |
| pÖ               | opening pressure                  |
| pS               | closing pressure                  |
| pÖ-pS            | hysteresis                        |
| pA-pE            | flow dependent pressure reduction |
| Q                | Flow                              |

## Characteristic curve, design example

The valve is set tight at 5 bar.

Desired flow rate 8000 l/h, medium H<sub>2</sub>O.

According to the curve, this results in the following values:

Set pressure pE: 5 bar

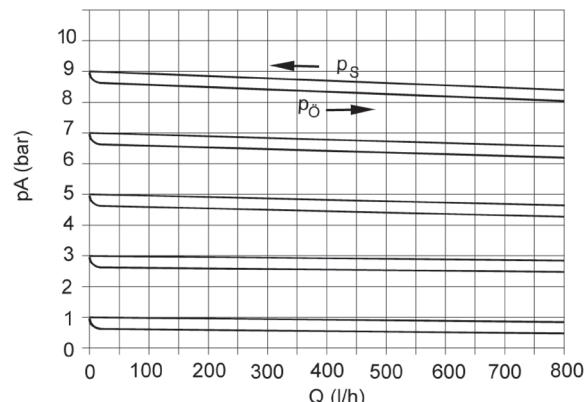

pressure reduction: 0.8 bar

working pressure pA: 4.4 bar

| Description |                  |
|-------------|------------------|
| pA          | Working pressure |
| pE          | set pressure     |
| pÖ          | opening pressure |
| Δp          | Pressure loss    |
| Q           | Flow             |

**pS** closing pressure

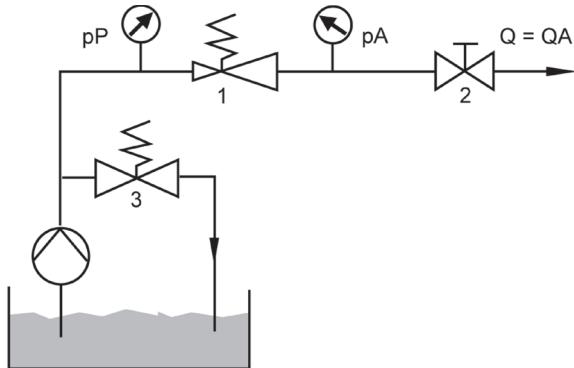

**pO** opening pressure

**Q** Flow

## Pressure Reducing Valve DMV 755

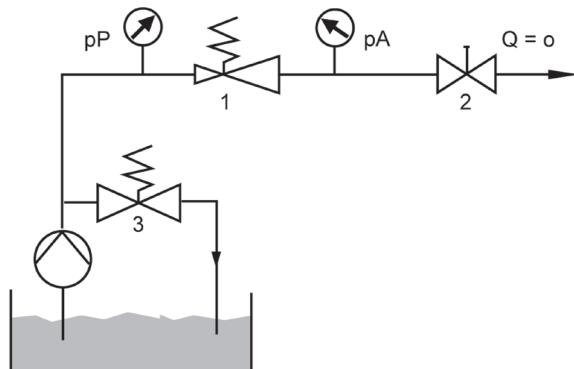

### Applications for pressure reduction valves

Example 1: secondary pressure - system dynamically flowing

If the stop valve is closed, the working pressure  $p_A$  rises by the amount of the closing pressure  $p_S$ .

Example 2: secondary pressure - system closed

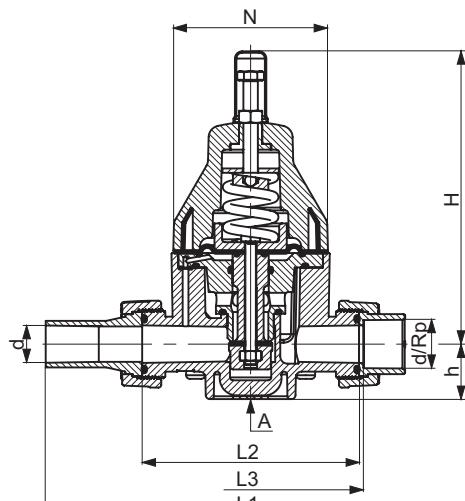

If the stop valve is opened, the working pressure  $p_A$  drops by the amount of the opening pressure  $p_O$ .

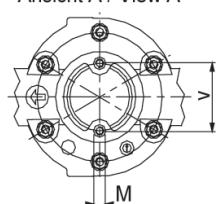

| Description |                           |
|-------------|---------------------------|
| $p_A$       | Working pressure          |
| $p_P$       | Pump pressure             |
| $Q$         | Flow                      |
| $QA$        | Flow in the working point |
| <b>1</b>    | Pressure reducing valve   |
| <b>2</b>    | Stop valve                |
| <b>3</b>    | Pressure relief valve     |
